Part of Paper No. 19

Continuation of 5. does NOT place the application in condition for allowance because: the prior art still meets the limitations in the claims. The argument that "electroplated conductive link" sufficiently distinuguishes the claims from the prior art is not persuasive since "electroplated" is directed to how the conductive link is produced/made and does not define a structural limitation. Please see MPEP 2113. The determination of patentability of a structure is based on the product itself and does not depend on its method of production. The claim calls for an "electroplated conductive link" which is a "conductive link" that is produced by electroplating. The prior art shows conductive links and therefore the links are the same (functionally and/or structurally) as the claimed links. In addition, claim 40 even discusses the process of making the conductive links, "formed during an electroplating process". Once the examiner provides a rationale (papers 8 and 15) tending to show that the claimed product appears to be the same or similar to that of the prior art, although produced by a different process, the burden shifts to applicant to come forward with evidence establishing an unobvious difference between the claimed product and the prior art product (MPEP 2113).
